Submit Notes

```
The config file option 'submit' was used.
```

General Notes

```
Software environment:
  export MPI_REQUEST_MAX=65536
  export MPI_TYPE_MAX=32768
  export MPI_BUFS_THRESHOLD=1
  export MPI_IB_RAILS=2
  ulimit -s unlimited

BIOS settings:
  AMI BIOS version 2.0

Job Placement:
  In the base run, each MPI job is assigned to a topologically compact
  set of nodes, i.e. the minimal needed number of switches was
  used for each job: 2 switch for up to 256 ranks, 4 switches
  for 512 ranks.

Additional notes regarding interconnect:
  The Infiniband network consists of two independent planes,
  with half the switches in the system allocated to each plane.
  I/O traffic is restricted to one plane, while MPI traffic can
  use both planes.

  SGI manufactures its own switch blades using unmodified Mellanox
  switch ASICs. The test system has SGI QDR_1.5_HYPR_2454 switch
  with Mellanox 36-port QDR Infiniband switch Device 48438
  (InfiniScale IV).
