Notes/Summary Of Tuning Parameters: (Continued on Side 2 of 2)

The NetApp F220 uses RAID to combine all of its disks into a single large file system. It uses a real-time embedded kernel that processes NFS requests right from the network layer without any NFS daemons. It uses non-volatile RAM to improve NFS performance.

To run the SFS benchmark, configure the NetApp F220 by adding this line to /etc/rc:

options minra 1 nosnap 1 nosnapdir 1
